

**eBPF (Tetragon)
kernel-level telemetry**

Sees: shell exec, TCP connections,
dangerous syscalls, capabilities

Misses: kubectl exec sessions,
RBAC changes, secret reads via API

**Kubernetes Audit Log
control-plane telemetry**

Sees: API calls, RBAC and identity
context, secret reads via API

Misses: shells spawned inside a pod,
lateral connections between pods

Same workload, joined on pod UID
(fixed for the pod's lifetime)

**CAGE causal graph
technique + chain correlation**
